Mean sea level (MSL) (often shortened to sea level) is an average level of the surface of one or more of Earth's oceans from which heights such as elevation may be measured. . MSL is a type of vertical datum – a standardised geodetic reference point – that is used, for example, as a chart datum in cartography and marine navigation, or, in ...

Sea level change is an important climate diagnostic. However, interpretation of the moderate rate of sea level rise of the past century is complicated by the fact that several competing processes contribute to net sea level change. The most important processes are melting of land ice (the large ice ...
