Epilepsy is a chronic disorder of the brain that affects people worldwide. It is characterized by recurrent seizures, which are brief episodes of involuntary movement that may involve a part of the body (partial) or the entire body (generalized), and are sometimes accompanied by loss of consciousness and control of bowel or bladder function.

Tratamentul de bază al epilepsiei îl constituie medicamentele anticonvulsivante, posibil pe întreaga durată a vieții. Alegerea anticonvulsivantului se face în funcție de tipul de criză, de sindromul epileptic, de alte medicamente utilizate, de alte probleme de sănătate și de vârsta și stilul de viață al pacientului.
